	12"	.120	S1212 -25	150 lbs	200

\*1/2" overlap for 8" and 16" strips, 2/3" overlap for 6" and 12" strips  
 USDA, reinforced or ribbed materials available. Contact factory for price.

## SB500 Mounting Bracket

One person can easily install or individually replace See-Thru Strip Curtains. They are hung on 1/4" studs welded to a support bracket which is inserted into a modular channel track. A sectionalized front bar is used to compress the strip material to the support bracket.

SB500 support brackets can be mounted to the ceiling lintel bar, suspended from chain, cable, threaded rod, angle iron, or supported from the floor. Support brackets also integrate with Track Hardware on page 9.

Please specify exact lengths needed.  
 Standard support spacing is approximately 5-7 feet.

### Did You Know?

In an independent study conducted by the United States Army at its Aberdeen Proving Grounds, **Spectra™** Curtain proved to be superior to all other semi-transparent welding curtains on the market today. Wilson holds three patents for the unique properties of its Spectra™ Curtain: Its orange color that cuts dangerous blue light; its florescent and white pigments that scatter light; and its dimpled texture that refracts and enlarges light. Insist on Wilson's Spectra™ Curtain. Look for the Spectra™ label.
